Aspen in the summer is sublime. And we at the Institute strive to gather many of the world’s most thoughtful, creative, and inspiring leaders for dynamic public programs, special events, and policy dialogues. And you’re invited to join us.

When the Institute founders launched this ambitious venture more than 65 years ago, they dreamed of establishing an oasis for open-minded exchange in an increasingly complex world. I think they would be proud to see how far their vision has come: on any given day at the Institute, you might hear a discussion on cutting-edge technology, critical 21st-century policy challenges, or the fundamental values that bind our society together. You might choose to join a seminar, attend a lecture, or be part of a multi-day festival; or, view our programming on our website. Whatever the format, whatever the topic — and whether this is your first Institute summer or your 65th — we are sure you will leave us feeling informed and stimulated.

We look forward to seeing you this summer and beyond.

All best,

Walter Isaacson
President and CEO
The Aspen Institute

Over the past decade the Aspen Institute has expanded its reach, energized its programs, and deepened its impact. Yet the growing complexity and scale of global challenges requires us to do more—to engage more people, more deeply. We have launched Scholars and Scholarships, the most far-reaching campaign in our history, to foster the next generation of diverse and promising leaders who are working to secure our society’s future. By supporting this initiative and enabling these innovators to experience the Institute’s programs, seminars, and networks, you will have a direct impact on their ability to drive positive change across the globe.

McCloskey Speaker Series
New Theories on the Origin of Life
Featuring Dr. Eric Smith, professor at the Earth-Life Science Institute in Tokyo and the Santa Fe Institute. For most of the 20th century, complex biological views of evolution have been central to the way scientists think about the origin of life. But progress over the past 40 years in such fields as ocean exploration, microbiology, and planetary science has come together to suggest that life's origin may have been built on a core chemical blueprint. Dr. Smith argues that we need a new understanding of the nature of life, in which the dominant, Darwinian view of a "struggle for existence" comes second, and life at its core came about as a necessary layer of our maturing planet.
